INSTALL WITH CONFIDENCE
America’s Most Trusted Polymeric Jointing Products
**Zen at Work**
Easy, fast and clean, NOCO is the first true alternative to mortar and stone dust.

**NO COMPACTION**
- Compressive strength that is perfectly adapted to installations where compaction is not possible or not traditionally used.
- Stays flexible and responds to ground movements that could cause the joints to crack and break apart or damage the stones.
- Strongly adheres to the inner walls of pavers and stones without ever contracting.

**Ideal for flagstones, pool decks, patios and walkways**
- The first polymeric jointing product made specifically for surfaces that are not suited for mechanical compaction.
- Can be used with a hard base or a cement/sand base.
- Clean, easy, fast and durable alternative to mortar jointing and stone dust.
- For residential and commercial projects.

**For joints from 1/4 to 4 inches wide**
- NOCO’s specially selected sand flows smoothly and evenly into joints.
- Techniseal’s binding technology results in impervious joints with great resistance to weed growth, insect invasion and erosion.

**Applications**
- Natural stones, concrete pavers, wet cast pavers, large slabs, and highly textured surfaces where a plate compactor can’t be used
- Concrete overlay or cement/sand bedding installations
- False joints

1. Spread and fill the gaps
2. Level with blower
3. Activate by watering
