Others: dial (514) 523-8324 (Canada)

APPLICATIONS
• Driveways, commercial parking lots, pedestrian areas, etc.

PROPERTIES
• Long-lasting, resistant filler compound for potholes
• Smoooths out easily
• Requires no compaction
• For repairs of 3/4” (2 cm) thick or more

DESCRIPTION
Techniseal® Acrylic Patching Compound for Asphalt is made of an ultraresistant thermoplastic acrylic binder mixed with silica and stone granules. Similar to asphalt in colour and texture, it easily fills potholes and changes in level. More durable than regular tar-based asphalt compounds, it requires no compaction and allows uniform repairs.

DIRECTIONS

BEFORE YOU BEGIN
• Surface must be clean, dry and warm to the touch. • Temperature must be above 10°C. • Rain should not be forecasted for the next 24 hours. • ALWAYS TEST on a small hidden area to ensure that result meets your expectations. For large repairs, use Techniseal® Asphalt Compound.

SURFACE PREPARATION (ESSENTIAL)
Using a stiff brush and a cold chisel, thoroughly clean and clear area to be repaired, removing pebbles, crumbled asphalt, rubbish, etc.
APPLICATION

**Required Tool:** Trowel

Apply a coat no thicker than 4 cm (1 ½ in), pack down and smooth. When repairing a hole, it is possible to reduce
its depth with sand or gravel before applying the compound. For patches thicker than 4 cm (1 ½ in), apply several
successive layers, letting the compound harden between each application. Let dry at least 48 hours before allowing
traffic on the surface or applying a protector.

For a uniform appearance and maximum protection, apply a Techniseal® Protector for Asphalt to the entire surface.

STORAGE

Once the container has been opened, it is recommended to use the entire content because it could dry. Store at a
temperature above 15°C.
