

HARDSCAPE SPACERS

Techniseal's plastic or rubber spacers for exterior hardscape are made of high-quality materials and built to sustain the weight of the vast majority of pavers, slabs and tiles available on the market.

The **PLASTIC SPACER** is transparent and discreet, providing added stability to your work and guaranteeing even spaces between tiles. Sections are designed to snap apart for pattern flexibility and flush installation against another structure.

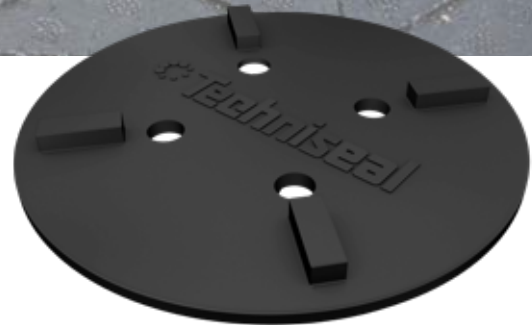

The **RUBBER SPACER** also gives plenty of added stability as well as exceptional noise reduction.

PLASTIC SPACERS

70975916

- 10mm height ensures a deep, stable corner joint filled with more jointing material
- Guarantees even spaces between tiles
- Saves time & effort on installation
- 6,25cm (2.5") diameter
- Spacing width: 4mm (5/32")
- Ideal for use over EZ Base® foam panels

RUBBER SPACERS

70971151

- Noise reduction properties
- Provides added stability
- Guarantees even spaces between tiles
- Saves time & effort on installation
- 3" diameter
